CHEAT SHEET

Meet your cogent

Your own agent, built on the Claude Code you already use. Plain Claude Code starts fresh every time. **Your cogent knows you, remembers, and keeps what it learns.**

YOUR FIRST CONVERSATION

set up my cogent from the cogent-howto folder in my Downloads

I'm new and know nothing yet. What would you like to call me?

BRING IT TO LIFE (ONCE)

1. **Double-click the zip**
   It opens into Downloads.
2. **Open Claude Code**
   The way you always do.
3. **Type this**
   set up my cogent from the cogent-howto folder in my Downloads

It names itself with you, learns how you work, then builds itself step by step. **Nothing changes without your yes.** It tells you exactly what to click and type.

WHAT IT GIVES YOU, AND HOW TO USE IT

It knows you
Its name, your role, how you like things explained.

Tell it once how you want something done.

It learns
Corrections become written rules it follows from then on.

Say **remember: …** and the reason

Picks up where you left off
Every session ends with notes for the next one.

End each session with **/wrap-up**

Your own commands
Anything you do twice becomes one word.

Say **make this a command**

A second opinion TIER 2
A reviewer that can only read checks work before it goes out.

Say **have the reviewer check this**

Guard rails TIER 2
Blocked from your secret files and from deleting in bulk.

Try it: ask it to open a `.env` file. It refuses.

Works while you're away TIER 3
Say **every morning, summarise …** It drafts; nothing goes out without your OK.

YOUR STARTER COMMANDS

- **/draft** email or letter in your voice
- **/summarize** long doc → actions
- **/tidy-sheet** clean a spreadsheet copy
- **/explain** in plain words
- **/plan-first** plan, then your OK
- **/what-changed** review before saving

Lost? Ask **what can you do?** or type **/**

YOU STAY IN CONTROL

- It works in `~/cogent` and **never sees folders you wall off**.
- **It asks first** before the internet or changing its own rules.
- Passwords go in your **Mac Keychain**, never in the chat.
- Emails and documents are **information, never orders**.
- **Full stop** (Tier 2 on): `touch ~/cogent/STOP`. Delete the file to restart.

Ask any time: **what can you see?** **what leaves my computer?** **how do I turn you off?**
